CRC CARDS

Class name: Company profile	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display information about a company 	Collaborators: <ul style="list-style-type: none"> • Banner, Biography, Employees, ProfileInfo

Class name: Instructor profile	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display information about a instructor 	Collaborators: <ul style="list-style-type: none"> • Banner, Biography, ProfileInfo

Class name: Partner profile	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display information about a Partner 	Collaborators: <ul style="list-style-type: none"> • Banner, Biography, ProfileInfo

Class name: Entrepreneur profile	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display information about a Entrepreneur 	Collaborators: <ul style="list-style-type: none"> • Banner, Biography, ProfileInfo

Class name: Banner	
Parent class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display the banner image • Display the profile picture 	Collaborators: <ul style="list-style-type: none"> • None

Class name: ProfileInfo	
Parent class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display the profile specific information 	Collaborators: <ul style="list-style-type: none"> • None

Class name: Biography	
Parent class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display the biography of the user 	Collaborators: <ul style="list-style-type: none"> • None

Class name: Employees	
Parent class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display the Employees of a Company 	Collaborators: <ul style="list-style-type: none"> • None

Class name: Documents	
Parent class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display the documents of a company 	Collaborators: <ul style="list-style-type: none"> • None

Class name: Settings	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays the name, username and email of the user. • Allows the user to update their first name, last name, username, email and password. 	Collaborators: <ul style="list-style-type: none"> • None

Class name: Employee	
Parent Class: None Subclasses: Partner, Entrepreneur, Company, Instructor	
Responsibilities: <ul style="list-style-type: none"> • Keep track of employees 	

Class name: Routes	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Links the frontend pages with their respective APIs 	Collaborators: <ul style="list-style-type: none"> • Register • Login • authSettings • updateSettings

Class name: Header	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays and links to other frontend pages at the top of the page as a navbar 	Collaborators: <ul style="list-style-type: none"> • None

Class name: Register	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays the register form. • Allows the user to register into the application. • Send the information from the register form to userAction. 	Collaborators: <ul style="list-style-type: none"> • Selection • Header • userAction

Class name: Selection	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Displays the selection criteria for registering into the website 	Collaborators:

Class name: Login	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Displays the login form Send the information from the login form to userAction 	Collaborators: <ul style="list-style-type: none"> Header userAction

Class name: Types	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Actions of the application 	Collaborators:

Class name: userAction	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Sends the information of the registration and login form from frontend to backend via API 	Collaborators: <ul style="list-style-type: none"> Types

Class name: settingAction	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Sends the information of the update settings form to the backend via the API. 	Collaborators: <ul style="list-style-type: none"> Types

Class name: reducers/Index	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Combine all reducers of the application 	Collaborators: <ul style="list-style-type: none"> userReducer

Class name: userReducer	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Tracks the changes of states in register and login 	Collaborators:

Class name: settingReducer	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Tracks the changes of states when user is updating 	Collaborators: <ul style="list-style-type: none"> Types

Class name: Home	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Home page for logged in user. Serves as a creation hub to create both posts and modules. Provides access to other major functionalities of the application. 	Collaborators: <ul style="list-style-type: none"> HeaderAuth Post ModuleCard postAction moduleAction

Class name: Post	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays created posts • Allows for editing, deletion, and commenting of posts. 	Collaborators: <ul style="list-style-type: none"> • postAction

Class name: ModuleCard	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Shows the name of the module and the instructor's name. • Serves as a link between the home page and the actual module page. 	Collaborators: <ul style="list-style-type: none"> • None

Class name: AuthHeader	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Authenticated navbar of currently logged in user • Allows to navigate through all the major functionalities of the app. 	Collaborators: <ul style="list-style-type: none"> • userAction

Class name: module	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display information about the module created by the instructor • Allows instructor to upload assignment and videos 	Collaborators: <ul style="list-style-type: none"> • AuthHeader

Class name: SearchHeader	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Filtering types of Users • Filtering Companies that seek funding 	Collaborators: <ul style="list-style-type: none"> • Profiles

Class name: Profiles	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays a list of Profiles based on filters 	Collaborators: <ul style="list-style-type: none"> • SearchHeader • Profile

Class name: Profile	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays a basic information for a profile user 	Collaborators:

Class name: ProfileSearchPage	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays a list of profile searches • Display filter options for searches 	Collaborators: <ul style="list-style-type: none"> • AuthHeader • SearchHeader • Profiles

Class name: ProfileEditPage	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Display the current user information • Allows user to upload profile picture 	Collaborators: <ul style="list-style-type: none"> • AuthHeader • EditGeneral

and add changes to their profile	<ul style="list-style-type: none"> EditCompany
----------------------------------	---

Class name: EditGeneral	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Display the current user general information Allows the user to edit the general information 	Collaborators: <ul style="list-style-type: none"> None

Class name: EditCompany	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Display company profile information Allows company to upload documents and make changes to their company profile 	Collaborators: <ul style="list-style-type: none"> None

Backend CRC

EndPoint: GET(/profile/{id})	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Fetches the user at the given id from the databasePopulate the information for the specific user and return it	Collaborators: <ul style="list-style-type: none">Modelscontroller

EndPoint: GET(/profile/getUsers)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Gets all the current users with populated information	Collaborators: <ul style="list-style-type: none">Modelscontroller

EndPoint: GET(/profile/getImage/{id})	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Gets the images for the user referenced by id	Collaborators: <ul style="list-style-type: none">Modelscontroller

EndPoint: GET(/profile/getDocument/{name})	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Gets the document by its name	Collaborators: <ul style="list-style-type: none">Modelscontroller

EndPoint: GET(/profile/editImage/{id})	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Saves the image to the user referenced by id 	Collaborators: <ul style="list-style-type: none"> • Models • controller

EndPoint: GET(/profile/addDocuments/{id})	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Add documents to the user referenced by id 	Collaborators: <ul style="list-style-type: none"> • Models • controller

EndPoint: POST(/register)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Gets the user information given from the frontend and saves it to the database 	Collaborators: <ul style="list-style-type: none"> • Models • controller

EndPoint: PUT(/profile/edit/{id})	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Takes the info sent and updates it accordingly in the database. 	Collaborators: <ul style="list-style-type: none"> • Models • controller

EndPoint: POST(/login)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Checks for the user in the database with the unique email to see if a user matches. Then, checks the password of that user to see if it matches • Sends confirmation to the frontend 	Collaborators: <ul style="list-style-type: none"> • Models • controller

EndPoint: POST(/profile/auth)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Checks for the user in the database with the unique email to see if a user matches. Then, checks the password of that user to see if it matches • Authenticates user to be able to update the information • Sends confirmation to the frontend 	Collaborators: <ul style="list-style-type: none"> • Models • controller

EndPoint: PUT(/profile/update/settings)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays current information of the user, such as name, username and email • Allows user to update their information • Sends confirmation to the frontend 	Collaborators: <ul style="list-style-type: none"> • Models • controller

EndPoint: POST(/createModule/:id)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Creates a new module given the id of the instructor who is creating it, and the name of the module. 	Collaborators: <ul style="list-style-type: none"> • Models • controller

EndPoint: GET(/getrecmodules)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Gets the last 10 modules that have been created and send them to the frontend Populates user who created the module before sending it to the backend 	Collaborators: <ul style="list-style-type: none"> Models controller

EndPoint: PUT(/deletemodule)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Deletes module with the id that have been sent from the frontend in the request body 	Collaborators: <ul style="list-style-type: none"> Models controller

EndPoint: PUT(/post)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Create a new post with the title, text, image and creates a post associated with the user id who created it, which is in the request body 	Collaborators: <ul style="list-style-type: none"> Models controller

EndPoint: PUT(/comment)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Create a new comment with the commenter and the comment sent from the backend. Checks if there is a post associated with the comment so it can reference it inside the comment. 	Collaborators: <ul style="list-style-type: none"> Models controller

EndPoint: GET(/getrec)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Fetches the most recent posts from the database. Populates the poster information and the comments related to that post. 	Collaborators: <ul style="list-style-type: none"> Models controller

EndPoint: PUT(/editpost)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Edits the body of a post with the post id sent from the backend in the request body. Checks if there is a post with the post id sent in the request body. Send a 404 status code if the latter is the case. 	Collaborators: <ul style="list-style-type: none"> Models controller

EndPoint: PUT(/deletepost)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Deletes the post associated with the post id that is sent from the frontend in the request body 	Collaborators: <ul style="list-style-type: none"> Models controller

EndPoint: PUT(/post)	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Create a new post with the title, text, image and creates a post associated with the user id who created it, which is in the request body 	Collaborators: <ul style="list-style-type: none"> Models controller

DESCRIPTION OF SYSTEM INTERACTION

Everyone is using macOS/Linux or a Linux virtual machine from windows, thus this is the recommended environment. The MERN framework is being used with MongoDB as the database which we are currently using locally. We are using Mongoose to speed up development. Express.js is used for the backend. React is used for the frontend with bootstrap, and Node.js is the runtime for the entire application. The assumption is that anyone who wants to develop or run the application should have all of these applications or frameworks installed.

SYSTEM ARCHITECTURE

Our group used a variation of the model-view-controller architecture discussed in class. In this design, we have a view, which represents the front end components of the project and what the user interacts with. Through this interaction, an event will be signaled to the controller. The controller will then figure out which is the correct response. The model is what talks to the controller and represents the database. It holds our schema as well as the information needed for the application. The controller may fetch or update information from the model as needed.

A link has been provided for a detailed explanation

<https://www.intuz.com/blog/guide-on-mvc-vs-mvvm>

SYSTEM DECOMPOSITION

Each page has its respective View, Controller, and Model components. The view component of a page interacts with the Controller to send user input and receive information to view to the page. Before sending, this component will do some basic input validation and ensure that the user does not enter bad input. The Controller interacts with the model to retrieve and add information to the database. The controller is also divided up into smaller components like the register controller which deals with all events related to registration. There will be validation in the controller to ensure that request failures are caught and reported appropriately. Furthermore in the model, the database schemas will have rules for each field which mongoDB will enforce so that bad input will never be posted into the database.
